

Buss ChemTech AG, a well-established Technology Provider, EN ISO 9001-certified, located in Pratteln Switzerland with a long history as a Technology Provider serving the Chemical and Process Industries worldwide (www.buss-ct.com) is looking

to strengthen its engineering team with skilled

Project Engineers

Your duties and responsibilities

- Ensuring optimal order processing in technical, qualitative, scheduling and financial terms.
- Developing and contributing mechanical-technical expertise and know-how in dealing with machines and process equipment as well as their design and construction.
- Preparation of engineering documentation such as P&I diagrams, process equipment and machine specifications, documents for construction and piping planning, assembly and commissioning, etc.
- Checking workshop designs and engineering drawings from suppliers in the field of process equipment construction concerning the compliance with norms, standards and mechanical qualification.
- Using existing standards and helping to create new ones for the speedy execution of customer orders.

Our requirements

- Degree in process equipment engineering, design engineering, process engineering or mechanical engineering coupled with experience in the field of plant engineering and/or chemical plant construction.
- Proactive and conscientious personality with good, construction-oriented imagination.
- Thinking in a solution-oriented manner and enjoy working in small, committed teams.
- Liking to work independently, showing initiative, being goal-oriented and willingness to take on responsibility.
- In addition to the usual Office programs, you are familiar with CAD programs.
- Experience with the calculation of process equipment and piping is an advantage.
- A good command of written and spoken English completes the ideal profile.

Your environment: You will be active in a diverse, multidisciplinary environment and have the corresponding freedom to act and make decisions. We offer you a modern office with appropriate infrastructure, above-average social benefits and the exceptional opportunity to develop professionally and personally in the international environment of a technologically leading company.

You will spend approx. 20% of your active working time around the world.

Have you become curious, and would you like to learn more about us and the position? Send us your complete application documents and we are looking forward to inviting you for an interview.
